

Enterprise Mobile Security with Appthority & MobileIron

**Secure your enterprise data and employee
privacy from mobile threats.**

MobileIron

MOBILE EXPANDS YOUR DATA RISK

In your enterprise, thousands of employees are sharing critical company data across an ever-changing landscape of mobile devices, apps, and data networks. Mobile creates new threat pathways into the enterprise for attackers that must be identified and blocked before you lose valuable data.

Your MobileIron EMM instance helps you manage provisioning and devices. But effective, mobile threat defense, requires real-time intelligence about mobile threats and an efficient, automated, and integrated way to remove those threats from your environment.

GET PROTECTED WITH APPTHORITY

Appthority MTP offers the best protection from mobile threats to enterprise data and employee privacy. This means protection from the highest impact threats across mobile apps, devices, and networks.

Built with busy security teams in mind, the solution includes patented automation that streamlines mobile threat protection and automated malicious threat policies. Turnkey threat indicators, scoring, and policies are quickly scaled and customized to your company needs.

Phased implementation delivers app threat visibility and protection in one day — without an on-device agent — and then rapidly scales to extended mobile threat protection as you're ready.

MANAGE MOBILE RISK AS YOU MANAGE MOBILITY

The Appthority MTP EMM Connector seamlessly integrates with MobileIron, either in the cloud or on-prem, to share real-time threat intelligence and associated device and app compliance policies, enabling targeted device remediation via your MobileIron instance.

The advanced, bi-directional integration gives you the most effective way to defend your mobile environment across all threat vectors.

“Security and risk management leaders must familiarize themselves with mobile threat defense solutions and plan to gradually integrate them to mitigate mobile risks.”

– GARTNER, MARKET GUIDE TO MOBILE THREAT DEFENSE 2017

WITH APPTHORITY AND MOBILEIRON, YOU CAN:

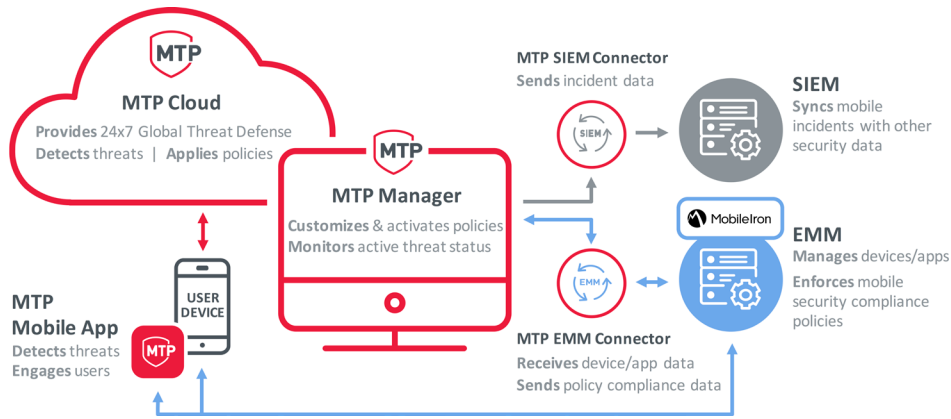

- Detect mobile threats in real-time across all your mobile users
- Use active threat intelligence to target specific devices for remediation and compliance
- Leverage the Appthority MTP Mobile App for device, app, and network threat protection and priority remediation direct to the mobile user

**“Emerging mobile threats
are now a CISO-level
concern. Appthority is THE
solution for managing those
threats.”**

– CISO, LEADING INTERNATIONAL BANK

APPTHORITY MTP - SYSTEM OVERVIEW

51% of companies reported breaches from employee mobile devices over the past year.

– AT&T CYBERSECURITY SURVEY 2017

KEY DEPLOYMENT & SECURITY FEATURES

Appthority MTP includes a range of integration features that leverage the unique capabilities of your MobileIron EMM. These include:

1. MobileIron Device and App Policy Sync

Appthority MTP can synchronize its mobile app compliance policies with your MobileIron EMM. Threat remediation actions can be set up in your MobileIron console using Appthority policy information.

2. High Risk Mobile Threat Escalation

High risk mobile threats detected by Appthority MTP are prioritized for immediate synchronization with MobileIron to enable automated triggering of compliance enforcement actions.

3. On-Device Threat Detection & Employee Protection

The Appthority MTP Mobile App (for iOS & Android) provides a complete threat protection solution for employee devices. When the MTP Mobile App detects new threats introduced to a mobile device, it will suggest clear and concise remediation steps directly to the employee. Remediation escalation options can be set in Appthority MTP to instruct MobileIron to initiate more aggressive remediation if the user fails to comply with the instructions.

4. Flexible Integration Deployment Options

The Appthority MTP EMM Connector makes integration simple and straightforward for your cloud or on-premises deployment of MobileIron. Since the MTP EMM Connector is packaged as a separate, stand-alone integration module, it can be automatically deployed in the Appthority MTP Cloud or downloaded for deployment in your data center's virtual host infrastructure.
